Please inquire if the PEG derivative that you need is not listed in this catalog. We may still have your compound, as not all accessible functional groups and molecular weight combinations are listed in the catalog. In addition, we have chemists dedicated to developing new products and processes on a custom synthesis basis, under confidentiality if needed, and we would be glad to provide a quote for you for this service. Please call or email us at tech@jenkemusa.com.

Payment Information

Payments via postal service please remit to:
JenKem Technology USA, 4105 W Spring Creek Pkwy Suite 606B, Plano, TX 75024, U. S. A.

Payment by bank draft or check must be made in U.S. dollars and have your purchase order number and invoice number listed.

Visa, Master, and American Express cards are acceptable.

Custom Synthesis

We have the capability of providing many PEG compounds that are not listed in this catalog and invite your inquiries for custom synthesis. Please call or Email us at tech@jenkemusa.com to discuss or request a quote for any custom synthesis services. Strict confidentiality can be arranged if needed.

Technical and Customer Support

We have a Technical Support Team ready to help answer any of your questions. Please do not hesitate to contact them at tech@jenkemusa.com.

Bulk Orders and Commercial Manufacture

Larger than catalog, bulk orders up through commercial scale manufacturing can be supplied at a substantial discount. Both non-GMP and GMP quality PEG products can be provided. Please contact us at tech@jenkemusa.com for quotations on these types of orders.

STORAGE AND HANDLING FOR PEG DERIVATIVES

All PEG derivatives should be stored under an inert atmosphere (e.g., dry Nitrogen or dry Argon), in the dark, at or below -20°C.

PEG NHS Esters and Maleimides react with moisture in the atmosphere. PEG aldehydes and PEG thiol can be deactivated by exposure to atmospheric oxygen. In addition, all PEG and PEG derivatives react with atmospheric oxygen to form peroxides along the backbone, a very slow process facilitated by light and heavy metals. The peroxides formed in this process can lead to chain cleavage, increasing the polydispersity of PEG and PEG derivatives.

Our PEG derivatives are thoroughly dried and packaged under an inert atmosphere. Generally, shipment of PEG derivatives at ambient temperature will not affect their activity. For long term storage, PEG derivatives should be stored at or below -20°C. Our standard shipping is at ambient temperature. Low temperature shipping (blue ice and dry ice) is also available upon request at an additional charge.

When using a PEG derivative after storage at low temperature, the material should be warmed up slowly to ambient temperature. After part of the material is taken out, the container with the remaining PEG derivative should be blanketed with an inert gas (e.g., dry Nitrogen or dry Argon) and stored again at or below -20°C.

For multiple uses, it is suggested that the PEG containing compounds be repackaged into several containers to reduce the risk of loss of activity due to repetitive freeze-thaw cycles. We offer repackaging services for PEG compounds at an additional charge.
